

# Blue Alligator Modules

Modules are a great way to customise how you want our solutions to best work for you, we have 6 available for SalesPresenter and CloudCart.

#1

## B2B Sales/Order Taking App

# Available Modules

## Reporting

- Run various order summary reports to get information on all orders being uploaded to the cloud via SalesPresenter and CloudCart.
- Allows you to see where your reps are creating their orders via a map.
- If you have the CloudSync module you will be able to print your own barcode labels.

## Mapping

- See customer locations on a map. Searching for a range of customers will drop pins on the customer address.
- See accounts in certain radius from your customer's location.
- Plan your route and see what customers will be on your journey.

## Complex Pricing

- Devices with this module will be able to utilise more complex pricing functionality such as customer-specific prices/discounts.
- Specify the prices of your products in currencies outside of your base currency.
- Utilise Quantity Break Structure for pricing/discounts to automatically adjust the price/discount dependant on the quantity that your customer is ordering.

## Order Download

- Have orders downloadable via the cloud in a standard CSV or XML format.
- Couple this with the CloudSync module to have your orders download in the format that you specify. Other tools that we have available can subsequently import these orders into your back-office system.

Scan the QR code to gain access to more information regarding each module!

# Available Modules

## Styling

- This allows you to have complete control over the design of your catalogues pages and your product thumbnails in SalesPresenter.
- Additional control over your order acknowledgement layouts.

## Customer Account History

- Allows you to upload historical customer order information to your Cloud account. Which will then be visible to SalesPresenter Users.
- You will also get access to various other data types such as Alternative Product Languages, Filter Trees, Backorders and Ledgers.

# CloudSync

## What It Does?

- Automatically have your data and media files uploaded to the Cloud.
- Have your generated files picked up and automatically changed into the format that the cloud requires them to be in prior to being uploaded.

## Where It Goes?

- Couple this with other available tools to automatically have your data extracted from your system and uploaded to the cloud. Orders can then also be imported into your system via CloudSync and our other tools.

We integrate with:
